

```
# =====  
# Create PyOR Environment in macOS (Official Python Only)  
# =====  
  
# 0. Install Python (if not installed)  
# Download from official site: https://www.python.org/downloads/macos/  
# Make sure Python is added to PATH (or use python3 explicitly)  
  
# 1. Create directory for venvs  
mkdir -p ~/venvs  
  
# 2. Verify Python  
python3 --version  
  
# 3. Create virtual environment  
python3 -m venv ~/venvs/pyorv2  
  
# 4. Activate environment  
source ~/venvs/pyorv2/bin/activate  
  
# 5. Upgrade pip (inside venv)  
python -m pip install --upgrade pip  
  
# 6. Install required packages  
python -m pip install \  
numpy scipy matplotlib sympy pillow \  
ipykernel ipywidgets ipympl jupyterlab \  
joblib diffrax equinox numba tqdm pyyaml  
  
# 7. Register kernel for Jupyter (IMPORTANT for VS Code)  
python -m ipykernel install --user --name=pyorv2 --display-name "Python (pyorv2)"  
  
# 8. Deactivate (if needed)  
deactivate  
  
# 9. Remove venv (if needed)  
rm -rf ~/venvs/pyorv2
```
